

“Request for financial aid to the Research Activities of IRRA Scientist Group”

We are highly elated to state that the IRRA Scientist Group has developed a ground-breaking research on “Innovative Rainmaking Technology by Laser System through Aircraft, initiating Endothermic Reactions similar to Natural Lightning Phenomena for Artificial Rainmaking on large scale in the Atmosphere”

Interestingly, this technology has been scientifically and practically proved in a laboratory cloud chamber. This technology can also be practically tried at the atmospheric level by inducing laser for condensation which forms water drops in the atmosphere. By shooting laser beams, NO and Ozone could be formed triggering endothermic reactions and resultantly condensation takes place. This method has been a unique invention of IRRA scientist in the field of rainmaking.

But of late, the IRRA scientist group is besieged with a huge funds crunch for leveraging its research activities. In this situation it would be of great help if in the interest of bringing about a Green Revolution, generous donations are received to boost the research. A proactive approach is what needed from all whoever is having a scientific temper. This act will definitely encourage IRRA Scientist for working towards bringing Green revolution for the betterment of entire world and the humankind.

*With best regards
Sincerely yours,*

IRRA Scientist Group
